

Following are the steps for “CLUSTER CREATION” and “enabling DBFS File browser” in Azure new UI:

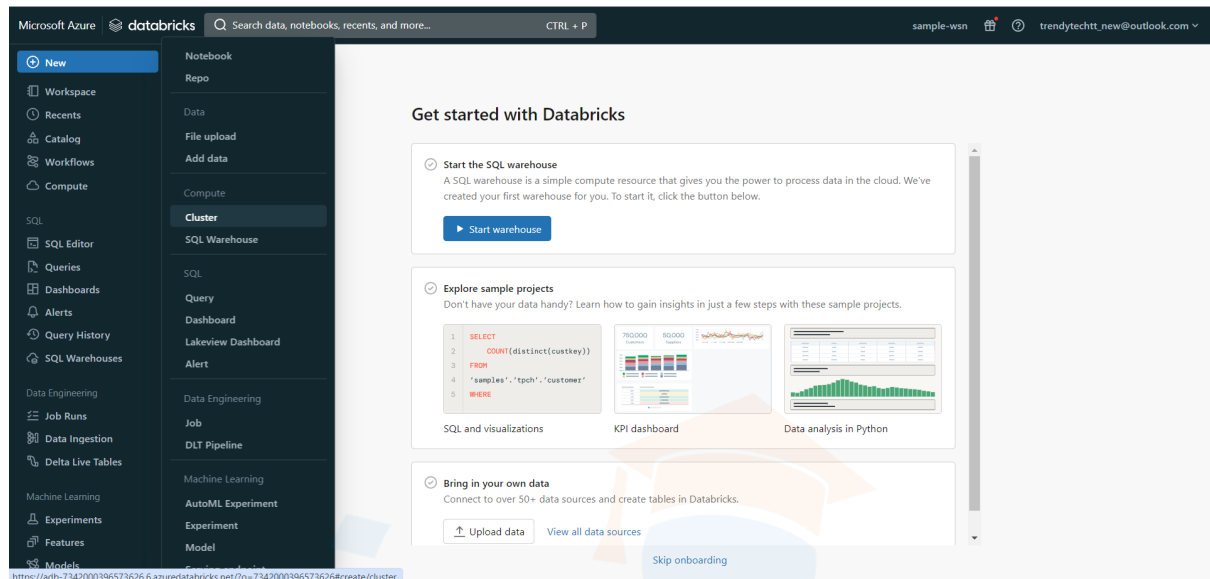

After creating a workspace in “Azure Databricks”, click on Launch workspace.

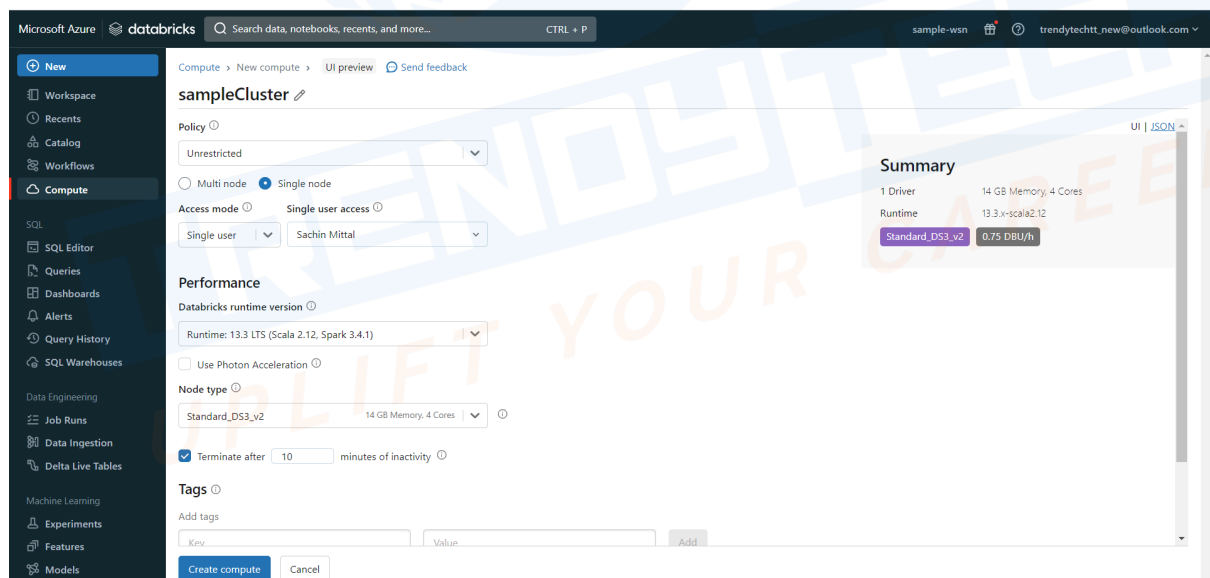

The following is the interface you'll get to see:

Click on new -> Cluster

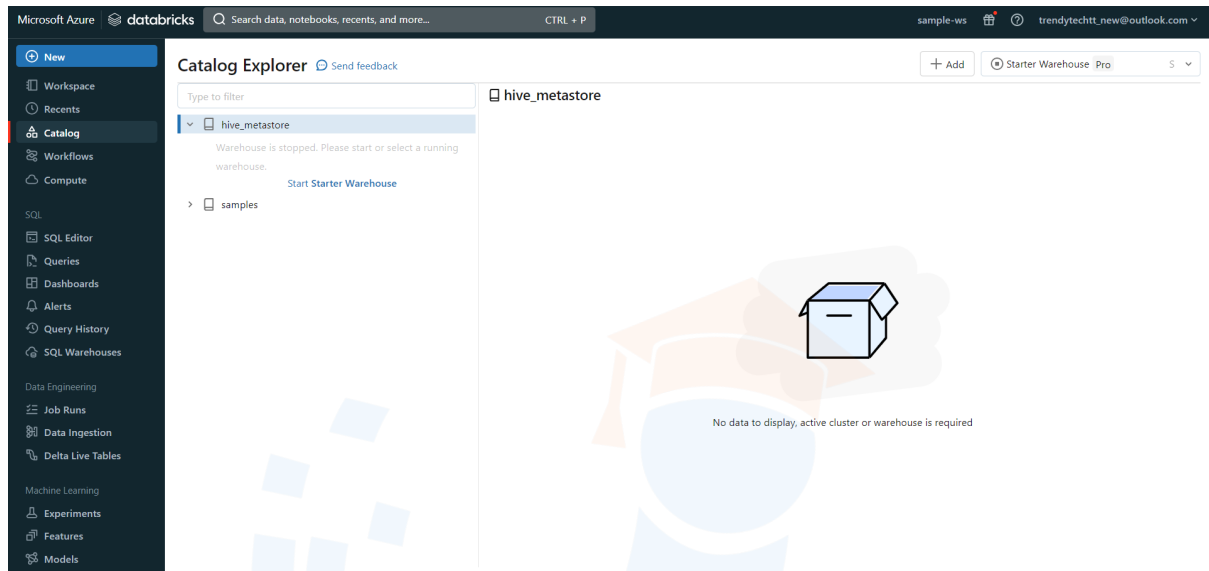

Now select “**single node**” and set the termination time to “10” minutes and click on “create compute”. Now the cluster will be created

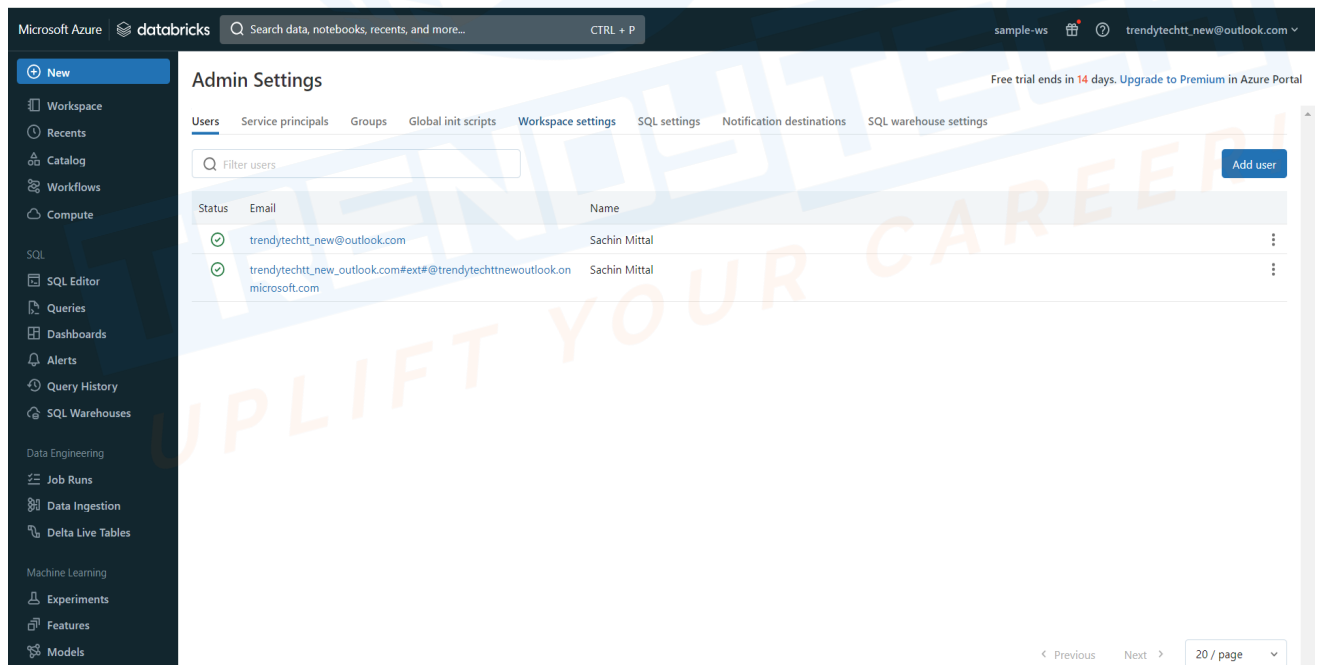

Enabling DBFS File Browser:

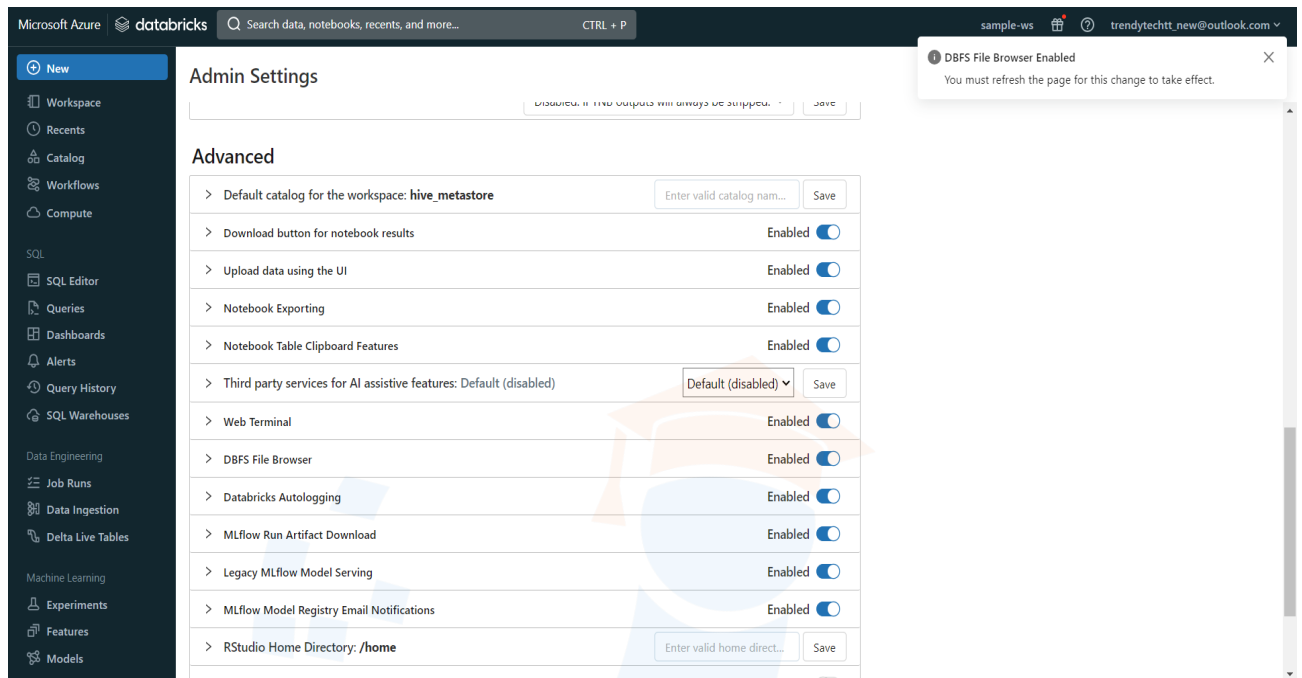

Click on mail id on the left and select “Admin Settings”

Now choose “Workspace settings”

You will get the following options after selecting “Workspace settings” and in the options enable the “DBFS File Browser” as shown below and refresh the page

Now click on Catalog and you can see the “Browse DBFS” on the right side.
